

# CHEMICAL SANITIZERS

## To properly sanitize a surface:

1. Wash with warm soapy water.
2. Rinse with clean water.
3. Wipe with sanitizer solution.
4. Air dry.

Chlorine	Quaternary Ammonia
1 ½ to 2 ½ teaspoons per gallon	Concentrations of quaternary ammonia based products vary; check label instructions.
50 – 200 ppm*	100 – 400 ppm*

- Use test strips to determine the proper strength of sanitizer.
- Each type of sanitizer requires its own test strip.
- Too much sanitizer is toxic and can cause chemical poisoning.
